

Associate Product Engineer

APP for OPS

Java/J2EE Developer

Location: Udaipur / Bangalore

Wooqer (www.wooqer.com) is One App for All Ops that enables businesses and teams to Create, Find and Discover WorkApps that gets the job done.

Building on existing success, and envisioned scale of growth, there is a need for additional expertise in ensuring stability, reliability, and recovery of our platform used by businesses across the world that are using our Creator Tool, SuperApp and Marketplace.

We are on a hyper-scale mode and looking for Product Engineers who want to take Challenges head-on, Scale Products Globally, Work with Industry Leaders, Grow and Lead Young.

Roles & Responsibilities:

- He/ She will be responsible for end to end feature development, quality and enhancements that will vastly enhance customer experience, retention, and increase adoption and reliance on the Wooqer platform.
- Will collaborate with QA, DevOps, Customer Success, and Customers to accomplish the organization's growth plans of scaling and supporting a world class B2B platform with marquee customers.
- Will be accountable for quality of releases and commitments to customers across the globe
- Will be highly motivated, will have an "ownership" attitude, and exhibit a high level of technical competence to operate with passion and confidence. This role will provide learning opportunities to keep his/her peers motivated and growth oriented.
- Will possess a collaborative mindset, exhibit great teamwork, experienced in working in a fast paced environment
- Will be transparent, communicative, patient, curious, research-minded and data-informed
- Will have abundant opportunities to grow professionally while being challenged with tough problems to solve.

Minimum Qualifications:

- Should have 2+ years of hands-on experience working in agile scrum environment, and developing BackEnd, specialized in integrations and API based applications/software
- Experience with one of the major relational databases (MySQL, Oracle, DB2, Postgres).
- Strong object oriented programming experience using Java/J2EE (Spring/Spring Boot Framework)
- Skills in HTML5, CSS, Json, JQuery, Javascript, Elasticsearch and Python will be preferred.
- Desirable to have experience in messaging protocol like MQTT and messaging middleware like ActiveMQ.
- Experience with Git, SVN or similar distributed SCM tools experience
- Experience and strong understanding of entire Software Development Life Cycle (SDLC), Software design/architecture process, unit testing & Test Driven Development (TDD), and Agile Framework
- Experience with Cloud technologies - AWS
- Strong knowledge of SOA, object-oriented programming, design patterns, multi-threaded application development
- Should possess good experience in reporting and analytics, queuing and real-time streaming systems
- Must have experience developing, maintaining, and innovating large scale, consumer facing web or mobile applications

About Wooqer

Our Journey

Wooqer is a one of its kind journey where profitability comes first. With customers who genuinely get value from the product and are willing to pay for it, scale is a natural next step. And that's the next phase of the Wooqer journey. We are preparing for growth.

The already available Creator tools that users love to use and the hundreds of apps users have self created on the Wooqer Super App form the foundation for our growth. Global expansion, New selling methodologies, Marketing focus and a B2B apps marketplace shall make it happen.

At Wooqer, Intelligence is hygiene and Execution capability a necessity. We build things right and blow customer expectations away, every single time. We chase crazy big goals, take full ownership, deliver excellence and celebrate our successes. We pay attention to detail and are right..most times as we simplify work for self and users. We are building the future. Today. And last but not the least, we are frugal. After all, we are still building a profitable company.

Our Leadership

Vishal Purohit
